Write a predicate to transform a list of numbers in a list of (number, frequency) pairs, where number occurs frequency times in the initial list.

Definiti un predicat care, dintr-o lista de numere, produce o lista de perechi (numar n), unde numar apare in lista initiala de n ori.

[11 22 11 22 11 33 11] -> [[11 4] [22 2] [33 1]]
[1 2 3 4 5] -> [[1 1] [2 1] [3 1] [4 1] [5 1]]
[1 1 1 1 1] -> [[1 5]]
[1 2 1 3 2 1 5] -> [[1 3] [2 2] [3 1] [5 1]]
